

Chapter 0 邏輯的基礎

Foundations of Logic

1. 什麼是推理 What Is Reasoning?	簡單定義: 根據牛棚現場留下的線索, 推斷出這盒牛奶到底能不能喝。 Simple Definition: Inferring whether this carton of milk is drinkable based on the clues left in the cowshed.	正常推理(有邏輯): 牛奶包裝膨脹且發出酸臭味, 推斷這盒牛奶已經變質。 Normal Reasoning (Logical): The milk carton is bloated and smells sour, so you infer this milk has spoiled.	神經病推理(沒邏輯): 牛奶包裝膨脹且發出酸臭味, 推斷這頭牛在擠奶時心情很抑鬱。 Crazy Reasoning (Illogical): The milk carton is bloated and smells sour, so you infer the cow was depressed during milking.	鬼才思維: 推理就是看著壞掉的牛奶找科學原因, 而不是找藉口編故事。 Genius Insight: Reasoning is looking at spoiled milk to find scientific causes, not making up stories to find excuses.
2. 論證與結論 Arguments and Conclusions	簡單定義: 「結論」是你想強推給顧客的牛奶; 「論證」是生產報告加上這盒牛奶的整套包裝。 Simple Definition: The "conclusion" is the milk you want to push to customers; the "argument" is the whole package including the production report and the milk.	有論證的說話: 這盒牛奶是安全可飲用的(結論), 因為它剛剛通過了國家食品安全檢測(前提/理由)。 Argumented Speech: This milk is safe to drink (conclusion) because it just passed the national food safety inspection (premise/reason).	沒論證的耍賴: 這盒牛奶反正就是安全可飲用的(結論), 我說是就是, 你愛買不買(沒有前提)。 No-Argument Tantrum: This milk is just safe to drink anyway (conclusion); it's because I said so, buy it or leave it (no premise).	鬼才思維: 不給檢驗報告就逼人喝牛奶, 那不叫推銷, 那叫強行投毒。 Genius Insight: Forcing people to drink milk without a test report isn't salesmanship; it's forced poisoning.
3. 有效與無效 Validity and Invalidity	簡單定義: 「有效」指的是工廠的牛奶加工流水線管道完好、沒有漏水。 Simple Definition: "Validity" means the pipelines of the milk processing line in the factory are intact and leak-free.	結構有效(管道完好): 所有從這條生產線出來的液體都是牛奶, 這盒液體是從這出來的, 所以它是牛奶。(管道結構完美, 即便裡面流的是污水, 結構依然有效) Structurally Valid (Intact Pipeline): All liquids from this production line are milk. This liquid is from here. Therefore, it is milk. (Perfect pipeline structure; even if it processes sewage, the structure is still valid)	結構無效(管道破裂): 所有牛奶都是液體, 這杯水是液體, 所以這杯水是牛奶。(管道錯亂, 把不相關的東西接在一起) Structurally Invalid (Burst Pipeline): All milk is liquid. This cup of water is liquid. Therefore, this cup of water is milk. (Messed-up pipeline, connecting unrelated things together)	鬼才思維: 有效只代表生產線沒漏, 不代表裡面裝的是真牛奶; 騙子常拿完美的流水線來裝假奶。 Genius Insight: Validity only means the production line isn't leaking, not that it's real milk; swindlers often use perfect pipelines to pack fake milk.

4. 邏輯三大定律 Three Fundamental Laws of Logic			
	Law of Identity 同一律	Law of Non-Contradiction 矛盾律	Law of Excluded Middle 排中律
Core Formula 核心公式	A is A A 是 A	A cannot be both B and not B A 不能既是 B 又不是 B	Either A or not A 要麼是 A, 要麼不是 A
Ontological Meaning 存在論意義	Essence of Objects 事物的本質 Stability of Attributes 屬性的穩定性 This carton of fresh milk stays as fresh milk inside the fridge. 這盒鮮牛奶放進冰箱, 它依然是鮮牛奶。	Impossibility of Contradictory States 矛盾狀態的不可能性 Mutual Exclusivity 互斥性 This milk carton cannot be both full and empty at the same time. 這盒牛奶不能同時是滿的又是空的。	Exhaustiveness of Truth States 真值狀態的窮盡性 No Middle Ground 不容中間態 This milk is either expired or not expired. 這盒牛奶要麼過期, 要麼沒過期。
Logical Requirement 邏輯要求	Consistency of Concepts 概念的一致性 Clarity of Definition 定義的明確性 The label "milk" cannot halfway mutate into "coconut juice". 標籤上的「牛奶」不能中途變成「椰子汁」。	Consistency of Assertions 論述的一致性 Prevention of Self-Sabotage 拒絕自我打臉 You cannot claim it is pure milk but contains fifty percent water. 不能宣稱它是純牛奶又說它加了五成水。	Decisiveness of Judgments 判斷的明確性 Prevention of Evading 拒絕和稀泥 You cannot give a vague answer facing safety inspections. 面對安全質檢, 不能給出模糊答案。
Violated Errors 違反之謬誤	Equivocation 偷換概念 Changing the Subject 轉移論題 Customers complain about no milk taste, but you talk about eco-packaging. 顧客投訴牛奶沒奶味, 你扯到這是環保包裝。	Double Standards 雙重標準 Claiming to be perfectly honest while admitting to adding water. 一邊說自己絕對誠實, 一邊承認在牛奶裡摻水。	False Compromise 模稜兩不可 Replying "hard to say, it is both safe and unsafe". 面對是否安全的質問, 回答「不好說, 既安全也不安全」。
